**Advanced Warning Systems, Inc. Becomes Exclusive Value Added Provider  
for INRange Systems' EMMA®**

(Altoona, PA) INRange Systems, Inc. is pleased to announce that Advanced Warning Systems, Inc. has become an Exclusive Value Added Provider of the **Electronic Medication Management Assistant System (EMMA®)** for active and retired high performance athletes in the National Football League.

"Advanced Warning Systems, Inc. "has a unique focus and has assembled a truly unique combination of disease management services and technology to provide active and retired high performance athletes in the National Football League and all sports franchises the opportunity to receive increased medical assistance," said Tony Pratt, INRange's Vice President of Sales and Marketing. "We are thrilled to have them as a Value Added Provider of the EMMA® System."

Advanced Warning Systems, Inc., based in Carlsbad, CA, provides disease management services to active and retired high performance athletes who face medical or age-related challenges with a true alternative to remote pain medication management beyond the walls of the hospital and clinics. Their focus on extending care, technology, and extensive expertise in the field of high performance athletes is the key to being able to deliver advanced services on a national level for athletes whether they are healthy and engaged or dealing with chronic physical illnesses.

INRange Systems, Inc. commercialized its remote medication management technology in August 2008. Treating a patient requires proper medication management. In today's world of evidence-based medicine and complex drug regimens, taking the right pill at the right time is not a simple task. The problem of non-compliance and drug errors has become an epidemic. EMMA® acts as the "arm of the caregiver" in the patient's home. It provides documented and detailed medication administration. EMMA® is remotely programmed by the pharmacist, insuring that the patient's medications are delivered according to the physician's prescribed dosing instructions.
